### Group Project Reflective Writing

I felt like my portion of the group project went rather smoothly. I was doing the first part of Newton's life in a group of 4, and he had a very interesting first part of his life. I chose this part because I always have felt like how someone started his life makes learning about them a lot more interesting and more aware. When I look up the life of famous people, I want to know what the first part of their life is like because it makes their middle and ending part of their life a lot more sense because it explains what people likes and how they behave.

What I enjoyed more about this assignment is the ability to work in groups. Our group works hard and we all do a wonderful job to work on our parts and our assignments to go along with it. Our group didn't know each other all that well from the start, but when we got into groups, we started to know each other quite a bit, and it really helped out for the group project.

In this physics class, I enjoyed learning about the new things in Physics. I felt like I did good in this class, but sometimes I missed the key concepts of some of the physics topics. Sometimes I have asked the teacher what a physics concept means so that I can learn better. What I also learned for this class is to go to class everyday (which I did) because while he does grades you on attendance, sometimes the book will not explain things properly while he does explain it better. The best thing about this class is that you

have many chances to get extra credits on problems and news journals, so don't miss out on them.
